12. Ground

The Siren / EL Signal Control Module is a component that allows users to have the same touch and feel of the switching controls on a BMW RT-P. This module translates momentary +12v inputs from the siren and emergency light activation buttons to trigger +12v outputs to generic siren amp and emergency light flasher boards.

EL Activation:

1st Press: activates front and rear emergency lights.

2nd Press: changes to rear lights only.

3rd Press: changes to front lights only.

Press and hold anytime to turn-OFF anytime.

Siren Activation:

1st Press: activates wail tone.

2nd Press: activates yelp tone.

3rd Press: activates hyper-yelp.

Press & hold to turn-OFF anytime.

To create a momentary chirp, double-tap and hold.
